

Contemporary Amperex Technology Co., Limited

Environmental Management Statement

1. Purpose

Contemporary Amperex Technology Co., Limited (hereinafter referred to as "CATL" or "the Company") is committed to the sustainable development of enterprises. Environmental management is an important part of sustainable development. CATL has applied the concept of sustainable development throughout its production activities and daily operations, and has continuously achieved new results in environmental management. CATL has implemented strict environmental management procedures and goals, and implemented strict process control in the areas of product development, raw material procurement and transportation, production process, pollutant discharge, resource and energy conservation and reuse, etc. The company has basically achieved the whole process control of pollution sources.

This document is specially formulated to standardize the Company's management requirements and measures in environmental aspects. CATL encourages its business partners (customers, suppliers, etc.) and internal employees to comply with the provisions of this document.

2. Scope of Application

2.1 This document applies to Contemporary Amperex Technology Co., Limited and its wholly-owned and controlled subsidiaries.

2.2 This document covers the Company's production operations, business facilities, products and services, distribution and logistics, management of waste, due diligence and mergers and acquisitions.

3. Management Structure

3.1 The Safety Production Committee, composed of senior managers. As the Company's highest decision-making body in environmental management, it is responsible for formulating the Company's environmental management policies, objectives and performance, supervising the implementation and improvement of environmental management-related policies, and organizing each production base to carry out environmental factor identification, comprehensive review, internal audit and management improvement, etc.

3.2 The Environmental Health and Safety Department promotes the implementation of various environmental protection measures and the completion and improvement of various indicators in accordance with environmental management guidelines and policies.

4. General Requirements

CATL takes "protecting the global environment, implementing cleaner production and building a green culture" as its environmental management policy to minimize the impact on the environment during its own operations. Based on this, the Company has formulated environmental management requirements, including but not limited to:

4.1 We ensure that the Company is in full compliance with all applicable environmental laws and regulations, including *Law of the People's Republic of China on the Prevention and Control of Air Pollution*, *Law of the People's Republic of China on the Prevention and Control of Environmental Pollution by Solid Waste*, *Law of the People's Republic of China on Prevention and Control of Water Pollution*, *Law of the People's Republic of China on Environmental Impact Assessment*, *Emission Standard of Pollutants for Battery Industry*, as well as local laws, regulations and implementation rules and regulations of the places where the Company operates.

4.2 CATL identifies and manages all key environmental impacts in a responsible manner, continuously improves environmental performance through active environmental management, gradually formulates specific targets and performance to reduce environmental impacts according to the Company's actual conditions, and monitors and reports on the environmental performance.

4.3 Throughout the whole process of product development, production, sales, use and disposal, we should carry out pollution prevention to avoid or reduce the generation of pollutants, and strive to achieve sustainable utilization of resources. We should use all resources efficiently, including fuel and other natural resources, and move toward low-carbon production through the progressive use of clean energy.

4.4 We provide necessary training and resources to actively support employees' environmental protection actions and suppliers' environmental management activities, help employees and suppliers realize the impact of their activities on the environment, and encourage them to make the same commitment.

4.5 We share the Company's knowledge of environmental issues and management practices with various stakeholders, including investors, governments, employees, and the communities in which we operate.

5. Control Measures

5.1 Environmental Management System Certification and Management

CATL has established the ISO 14001 environmental management system, which effectively promotes the environmental management and sustainable development of CATL. Under the guidance of the system, CATL has established system documents such as *Environmental Management Manual*, *Procedures for Control and Management of Exhaust Gas Emission*, *Procedures for Control and Management of Wastewater Discharge*, *Procedures for Control and Management of Solid Waste Pollutions* and other systems, to ensure that the Company abides by environmental laws and regulations, continuously reduce pollutant emissions, and improve the Company's environmental protection performance through the implementation of environmental management. Audited and certified by a third-party organization, CATL's environmental management system complies with the ISO 14001 environmental management system, and the certificate number is 0444441.

5.2 Energy and Carbon Management

CATL takes a series of measures such as equipment performance optimization and energy system transformation to reduce energy use and greenhouse gas emissions, actively increase the proportion of renewable energy use, and continuously increase the construction of photovoltaic power plants. In addition, we continue to invest in building "Lighthouse Factory" and "Zero-Carbon Factory" and the full use of artificial intelligence, cloud computing and intelligent energy management technologies, continuously improving the efficiency of production and operation to reduce the energy consumption in production.

5.3 "Three Wastes" Management

To properly handle the waste water, waste gas, noise and solid waste generated in the production and operation process, we have formulated an effective internal management system and regularly monitored to ensure that the waste water, waste gas, noise and solid waste are emitted and disposed of in accordance with laws and regulations. Meanwhile, we set an annual reduction plan to take effective measures according to our own actual situation, and formulated an environmental self-monitoring plan. Every year, we hire a qualified third-party monitoring organization to regularly monitor waste water, waste gas, noise, soil and surface water. CATL collects and sorts the solid waste. For recyclable waste, we hire an organization with technical capabilities for comprehensive utilization. For hazardous waste, we entrust a qualified disposal organization for hazardous disposal. At the same time, the Company formulates Annual Management Plan of Hazardous Wastes to achieve hazardous waste reduction.

5.4 Green Product Development

The Company will implement a series of environmental guidelines to reduce energy and water consumption in the process of developing new products, including:

- We choose raw materials with lower environmental footprint to reduce the impact on the environment at the source;
- We reduce energy and water use and waste generation in the process of operations, production and manufacturing;
- In the process of distribution, storage and transportation, we continue to explore green packaging solutions, give priority to recyclable, degradable and low-

consumption packaging materials, carry out packaging management in three aspects: recycled packaging materials, extreme packaging materials, and composite packaging materials;

- In the product use phase, actively improve the stability and battery performance and prolong its service life;
- In the product recycling stage, we are committed to R&D in directional recycling technology, cathode material synthesis technology, and cooperate with partners of industry chain upstream and downstream and scientific research institutes to create an ecological closed loop of the recycling of waste battery materials.

Through the above actions, we can reduce the consumption of non-renewable energy and natural resources, achieve long-term green development.

5.5 Supply Chain Environmental Management

For details about CATL's environmental management measures in the supply chain, please refer to *CATL Supply Chain Sustainable Development Management*.

Environmental Protection, Training and Communication

In order to improve employees' awareness of environmental protection, CATL regularly conducts environmental education and training for employees to prevent and reduce various environmental accidents. On each World Environment Day, which is celebrated on 5 June every year, CATL actively participates in various environmental protection activities organized by the environmental authorities, promotes the green and low-carbon environmental protection concept to the general public, and demonstrates the Company's favorable environmental image.
